

## Managed Security Solutions

### NETWORK PROTECTION

Internet Security is a critical component of any system connected to a network. All IT systems have a constant daily threat of attacks by hackers and intelligent, destructive or manipulative virus programs. Protection of Data, PC's, LANs, Systems and Applications is of paramount importance and failure to implement the utmost security presents a major business risk. DXI can provide assurance for the protection of your rights to access information and protection from intruders.

An audit carried out by DXI security experts, will identify your network risks and vulnerabilities. From this audit we can create and implement a security policy and solution specific to your requirements.

DXI has extensive experience in the field of security and offers a wide range of industry leading security products as part of its suite of Managed Security Solutions including DDOS, IDS, antivirus, RAS and obviously firewalls to name but a few.

Comprehensive 24x7x365 monitoring, where all events are captured and logged for further interrogation and client reporting, completes the fully comprehensive Managed Security Service.

From our fully managed entry-level shared firewall package, through our dedicated firewalls option to our High Availability solution, there is no more diligent and trustworthy organisation to assist with your security requirements than DXI.

#### Features

- World-class Security Solutions
- 24x7x365 Network Management and Support
