

In 2005 DXI completed the acquisition of RETEQ, a highly professional IT Infrastructure Services Provider, working with both private and public sector enterprises to strengthen their businesses through the provision of high-quality premise network solutions. The services offered provide an integral part of DXI 's "end to end" converged IT solutions.

RETEQ, like DXI, enjoys long term relationships with its customers, applying extensive knowledge to help map out strategy and practical expertise to deliver robust infrastructure solutions. Comprehensive support services are available to protect your investment, with options available to match the way you work.

We provide a complete cabling service for all LAN infrastructure implementations, upgrades, migrations, moves and changes and have experience of working in office premises, manufacturing plants, industrial sites, hotels, computer room environments and residential developments.

Premises Infrastructure is now a key element of a corporate IT network, supporting multiple communications applications and technologies. However, we are equally at home deploying, enhancing and supporting premise infrastructures as standalone solutions.

As an experienced network integrator, we have the necessary expertise and disciplines to design, build and support all elements of LAN infrastructure.

We take time to understand the needs of customers to ensure that the proposed solution meets with their immediate business needs whilst also keeping an eye on future requirements. There is no shortage of so called, "network specialists" waiting to offer a low cost cabling installation and equally as many offering the "best" price for hardware. But how many of them really understand how the ISO/IEC electrical specifications and link performance of the cabling system relate to the current and evolving LAN switching technologies?

If you are looking for an experienced Premises Infrastructure Provider to work with you on a long term basis to ensure your available budget secures the optimum infrastructure with the utmost reliability then we welcome your call.

Features

- Experienced accredited engineers
- Bespoke Solutions
- Comprehensive support

Benefits

- Consultancy service
- Project Management
- Rapid deployment
